DUPLICATE

This action duplicates an instance of the specified business object or list.

Syntax

```
DUPLICATE AttributeIdentifier() [ TO AttributeIdentifier() ][ EXCEPT Id ( ) ( , Id ( ))* ][ NO RULES ]
```

Where the first attribute identifier identifies an object or list to duplicate and the second one - the list to duplicate the original list to. The EXCEPT keyword identifies attribute names that should be excluded from duplication.

The NO RULES keyword creates an object without executing any rules at all. Be careful with this keyword as this may create an instance of the object with invalid data.

note

Business rules for objects created by DUPLICATE will not trigger on IS NEW. Use CREATE instead.
