Table of Contents

LIST_TABLE_END

Description

Whereas the LIST_TABLE function prints the entire table including the header, the combination of LIST_TABLE_START and LIST_TABLE_END functions allows using an existing header of the table. Just like the LIST_TABLE function it prints out members of a list of query results. However, you create the table in the document itself and only mark the start and end of the data. All tags in between the markers represent attributes to be printed (see example). AwareIM automatically inserts extra rows as required.

> **note**
> These functions can only be used inside tags in MS Word, Excel or HTML documents!

Parameters

LIST_TABLE_START function takes an identifier of the list or a string identifying the query (either Rule Language string or the name of the existing query) – see LIST_TABLE function. If the list identifier is used the second parameter may optionally indicate ordering of the list. LIST_TABLE_END has no parameters.

Example

```
Header1Header 2Header3
 <<LIST_TABLE_START(Client.Children)>><<Child.FirstName>>
 <<Child.LastName>><<Child.Age>><<LIST_TABLE_END()>>
```
