LIST_TO_JSON

Description

Converts a list of business objects into a JSON string. Specified attributes of each list member are printed out.

Parameters

1. A list to print out or a query finding business objects to print
2. If a list is specified an additional parameter can be optionally specified to contain sorting criteria in the Rule Language format.
3. Second, third, fourth and other parameters - attribute specification to include in JSON.
 1. Attribute specification consists of an attribute name, optionally followed by a JSON name and format separated by @ delimiter.
 2. If an attribute name starts with the # symbol the content of the attribute value is already a JSON formatted string which just needs to be inserted.
4. Returns a text string representing members of the list converted to JSON

Example

```
LIST_TO_JSON_FUNCTION(Client.Children, 'ORDER BY Client.Name DESC',  
'FirstName', 'LastName', 'Age', 'ID@My id', 'Date@Date@MMM dd yyyy')
```

This produces the following string:

```
{  
  "FirstName": "Jane",  
  "LastName" : "Allison",  
  "Age" : 15,  
  "My id" : "some value",  
  "Date": "Jan 2 2024"  
},  
{  
  "FirstName": "Bob",  
  "LastName" : "Fisk",  
  "Age" : 30,  
  "My id" : "some other value",  
  "Date": "Feb 12 2024"  
}
```
