# PARSE JSON2

## Description

Returns the value of the specified attribute in the same node

## Parameters

1. String in JSON format or expression producing such a string
2. A path to a JSON attribute in the JSONPath format (as explained here [\n](https://github.com/json-path/JsonPath))
3. The name of the JSON attribute in the same node, the value of which should be returned

## Example

```
Object.Value = PARSE_JSON2(Object.Attribute, `$.store.books[?(@.Name == 'Romeo and Juliet')]`, 'Author')
```

The above returns 'Shakespear'
