Known Issues,, References,, Required,, Business Object,, Rules

This is the template for INHERITED known issues pages - add a tag to Issue: to allow this to show on the tagged page

Required With Owned By References

This is a spacer column

Problem/Limitation Description

If two business objects are related through a parent/child relationship (see Reference Attributes) and the reference attribute to a child is defined as "Required" it is impossible to add a new child instance from a form of the parent instance using Add New button (see working with references in the operation mode)

This is a spacer column

Work Around

Do not force "Required" flag for reference attributes or create child instance first and then add it to a parent using Add button.
