Right-to-left Support 2

Right-to-left Support

Aware IM supports right-to-left orientation of the screen (RTL) for certain categories of users that require this. When a user with RTL support enabled logs in **Aware IM** automatically shows the screen in right-to-left orientation. All forms that the user sees will also support right-to-left input.

To enable RTL-support for a user make sure that the value of the RTL attribute in the user is set to Yes. The RTL attribute is a predefined attribute that is added by **Aware IM** automatically to all members of the SystemUser group. You can set the value of the RTL attribute by rules or explicitly from the user interface when the user record is created.
