Displaying and Uploading Pictures from Camera and/or Photo Library

One approach is to define an attribute of the Picture type for one of your forms. **AwareIM** will automatically generate controls to upload the image from a camera or photo library. This approach will work in both browser-based mobile applications and native mobile applications.

Another approach is to use the **MOBILE CAMERA SNAP INTO** action in some process (or **MOBILE CAMERA GET INTO** action to get access to photo library). When **AwareIM** executes this action the user will be able to upload a photo from camera or a photo library. The image will be written into the picture attribute specified in the action. For example:

```
MOBILE CAMERA SNAP INTO MyObject.MyPictureAttribute
```

Note that these actions will only work for native mobile applications - they will not work inside the mobile browser. Please see [configuring mobile apps](#) and [Rule Language Guide](#) for more details about these actions.
