How to register AwareIM application in Twitter

In order to allow users to login via Twitter you need to register your AwareIM application with Twitter. In order to do this:

- Go to the URL <https://dev.twitter.com/apps>
- Create a new application
- When specifying callback URL for the application enter the following URL:

<http://YourServerName:8080/AwareIM>

You can use localhost instead of the server name when testing your application.

When specifying “redirect URI” of the application enter the following URI:

<http://YourServerName:8080/AwareIM/req.awtw2>

- Copy consumer key and secret that Twitter should assign to your application – you will need these when setting up login options (see [How to set up Login via Facebook, Twitter and Google](#) section)

When users login to your AwareIM application they should use the following URL:

<http://YourServerName:8080/AwareIM/logon.awtw?domain=YourBusinessSpaceName&testingMode=false>
