How to register AwareIM application in Google

In order to allow users to login via Google you need to register your **AwareIM** application with Google. In order to do this:

- Go to the URL <https://code.google.com/apis/console>
- Create a new application
- When specifying redirect URI for the application enter the following URI:

<http://yourservername:8080/awareim/req.awggl2>

You can use localhost instead of the server name when testing your application.

When specifying “redirect URI” of the application enter the following URI:

<http://YourServerName:8080/AwareIM/req.awggl2>

- Copy client id and secret that Google should assign to your application – you will need these when setting up login options (see [How to set up Login via Facebook, Twitter and Google](#) section)
- If using synchronization with the Google Calendar make sure that access to the calendar API is allowed!

When users login to your **AwareIM** application they should use the following URL:

<http://YourServerName:8080/AwareIM/logon.awggl?domain=YourBusinessSpaceName&testingMode=false>
