How to re-use configurations

On certain occasions you may want to integrate all or parts of configurations of other systems into your system to re-use the definitions of business objects, business rules and other elements. For example, you might want to integrate certain aspects of sample applications into your system. To do this:

1. Create a business space representing the system you want to re-use – see the “[Adding/Editing Business Spaces](#)” section.
2. Import the configuration you want to re-use from a BSV file – see the “[Importing Business Space Version](#)” section.
3. Copy and paste the elements you want to re-use into your system (see the “[Copying](#) and [Pasting Elements](#)” sections)
4. Make the necessary adjustments to the copied elements if required.
5. Check integrity of the version to make sure that it remains consistent – see the “[Checking Version Integrity](#)” section.
