Programmers Reference, IDocumentDataDource Interface

IDocumentDataSource interface

This interface is used in the fillWithData function of the IDocumentEngine interface. The component implementing this interface provides access to the current values of object attributes in the Context and performs calculations with these values. There may be several instances of the business object in the Context and IDocumentDataSource allows iterating over all such instances. See also Context of Rule Execution

The methods of this interface that may be useful to document type components are described below:
