Modifying default behavior and presentation of content panels in visual perspectives

To modify the default behavior and presentation of content panels in visual perspectives you need to go to a particular visual perspective that you want to modify, select the content panel and then click on the “Scripts” property in the list of properties of the content panel.

The idea here is the same – you have two scripts as before. However, there are no Kendo UI widgets to modify here – you can only modify the markup of the content panel (either during initialization or after it has been drawn).

Two objects are exposed for the initialization script:

- “config” – this is the configuration of the Aware IM “panel” object, the code of which is in `AwareIM/Tomcat/webapps/AwareIM/aware_kendo/panel.js`

The markup of the panel is stored in the “bodyContent” property of the object `config.bodyContent`. This is the markup you are most likely to modify here

“parser” object – this is the controller (`AwareApp_Dashboard` in `AwareIM/Tomcat/webapps/AwareIM/aware_kendo/parsers/dashboard.js`)
