Access level 2

Access level

Access level determines what information users can see, how it is presented and what operations are available to them when they [login](#) into their [business_space](#) in the [operation_mode](#). Each system user has an access level. The [configurator](#) may define as many access levels as necessary to set restrictions and privileges for different categories of users. When a new user is registered the user is assigned one of the defined access levels.
