Business space documentation 2

Business space documentation

On request of a [configurator *aware_im*](#) will generate a complete self-containing documentation of a [business space](#). The documentation contains details of all [business objects](#), [processes](#), [rules](#) and other configuration elements specified in the business space. The generated document can be stored electronically and used by anyone without access to **Aware IM**. It can be searched for information of interest, printed out, filed away, used for audit purposes, etc.

The document is generated for a given [business space version](#). It is recommended to generate and keep documentation for each [published](#) version. This will allow keeping track of the information and rules that were in effect at a given time in the past.
