Business space integrity

A business space version may become inconsistent in the course of editing of its configuration elements. To check for possible integrity problems, such as references to non-existent business objects, invalid rules, etc., a configurator can use a command of the Configuration Tool that verifies the integrity of the business space version. **_aware_im_** always checks the integrity of the version when the version is being published or made available for testing. It will not allow publishing or testing an inconsistent version.
