Hosting environment 2

Hosting environment

aware_im allows users to access their **business space** in the **operation mode** from any location via the Internet using a standard Web browser. This requires **Aware IM Server** to be installed on a computer that has a permanent connection to the Internet with sufficient speed and bandwidth. The users who do not have a suitable Internet connection can run **Aware IM** Server on a computer managed by an Internet hosting service provider, which is called a hosting environment.

Working in **configuration mode** in a hosting environment is a little different. In particular, the **configurator** saves business space configuration into a file and then uploads it to **Aware IM** Server in the **operation mode** using a special command.

Users who only need to access their information system within a single location do not need a hosting environment.
