Query rule form 2

Query rule form

The rule form is a section of the query editor in the [Configuration Tool](#) where a [configurator](#) can specify a [query](#) using the [rule language](#). It can be used for queries that are too complex to be defined in the [simple form](#). For example, a query in the rule form that finds all members over 16 years old and lists them in the alphabetical order may look like this:

```
FIND Member WHERE Member.Age > 16 ORDER BY Member.LastName
```

This particular example can also be specified using the [simple form](#).
