**Testing mode** ..... 2

## Testing mode

Testing mode allows the [configurator](#) to try out a new [version](#) of a [business space](#) in the [operation mode](#) without disrupting the normal operation of the application. When the configurator moves a business space version under test, **Aware IM** creates a separate test business space in the operation mode according to the configuration of the new version. Nominated users can [login](#) into the testing mode of the business space to perform necessary testing.
