Validation rule 2

Validation rule

aware_im considers **rules** with a certain pattern to be validation rules. Here is an example of a validation rule:

```
If Customer.Name IS UNDEFINED Then REPORT ERROR 'Customer name is empty'
```

Aware IM applies such rules when a user edits a **business object** on the **object form** and does not accept changes if the entered data is invalid. Also, **Aware IM** automatically generates validation rules to handle conditions the **configurator** may specify for object attributes such as **required attributes** or **range of values**.
