Auto-generated form 2

Auto-generated form

An auto-generated form is an [object form](#) that **AwareIM** generates automatically in the [Operation mode](#). This way the [Configurator](#) does not have to do any work related to presentation of the object information in the [operation mode](#). With auto-generated forms the configurator can easily control which [attributes](#) appear on the form and in which order.

To display information in an enhanced or special fashion the configurator can supply [custom forms](#) or design [presentations](#).
