Business space integrity

A [business space version](#) may become inconsistent in the course of editing of its configuration elements. To check for possible integrity problems, such as references to non-existent [business objects](#), invalid [rules](#), etc., a [configurator](#) can use a command of the [Configuration Tool](#) that verifies the integrity of the business space version. **AwareIM** always checks the integrity of the version when the version is being [published](#) or made available for [testing](#). It will not allow publishing or testing an inconsistent version.
