Custom form

A custom form is an [object form](#) that the [configurator](#) can design to replace an [auto-generated form](#) that **AwareIM** supplies by default for [business objects](#). With custom forms the configurator has the freedom of choosing the layout, background, fonts, colors and other visual elements for displaying and editing of [object attributes](#).

The configurator can also design [presentations](#) for custom display, but not editing, of object attributes.
