Export 2

Export

Export is an [action](#) that writes values of [attributes](#) of a [business object](#) into a file in the [operation mode](#). It can be used to extract required information from the system on a one-off or [regular basis](#), for example to exchange data with software systems that do not support [direct communication](#). It is also possible to export data of multiple business objects for editing in a specialised software application and [import](#) the modified data back into **AwareIM**.
