Hosting environment 2

Hosting environment

AwareIM allows users to access their [business space](#) in the [operation mode](#) from any location via the Internet using a standard Web browser. This requires [Aware IM Server](#) to be installed on a computer that has a permanent connection to the Internet with sufficient speed and bandwidth. The users who do not have a suitable Internet connection can run **Aware IM** Server on a computer managed by an Internet hosting service provider, which is called a hosting environment.

Working in [configuration mode](#) in a hosting environment is a little different. In particular, the [configurator](#) saves business space configuration into a file and then uploads it to **Aware IM** Server in the [operation mode](#) using a special command.

Users who only need to access their information system within a single location do not need a hosting environment.
