Validation rule 2

Validation rule

AwareIM considers [rules](#) with a certain pattern to be validation rules. Here is an example of a validation rule:

```
IF Customer.Name IS UNDEFINED THEN REPORT ERROR 'Customer name is empty'
```

Aware IM applies such rules when a user edits a [business object](#) on the [object form](#) and does not accept changes if the entered data is invalid. Also, **Aware IM** [automatically generates](#) validation rules to handle conditions the [configurator](#) may specify for object attributes such as [required attributes](#) or [range of values](#).
