While semantics 2

While semantics

'While semantics' is an option for [rules](#) in [unordered collections](#) the [configurator](#) may use in some rare circumstances to tell **AwareIM** that it should keep executing rule [actions](#) while the rule [conditions](#) are satisfied. Normally **Aware IM** executes rule actions once, and only executes them again if [attributes](#) mentioned in the rule change.

This is an advanced rule option and should be used with care since it may cause an endless execution loop.
