## createEntity (IProcess, String)

```
public IEntity create Entity(IProcess parent, String entityName)
throws ServerTimeOutException, AccessDeniedException, ExecutionException;
```

This method creates new instance of the specified business object. If there are any rules associated with the business object they are executed.

### Parameters

entityName	the name of the business object to create
------------	---

### Returns

The created instance of the business object. The attributes are initialized with the values set by the initialization rules (if any), otherwise the initial values are null.
