createEntity (IProcess, String)

```
public IEntity create Entity(IProcess parent, String entityName)
throws ServerTimeOutException, AccessDeniedException, ExecutionException;
```

This method creates new instance of the specified business object. If there are any rules associated with the business object they are executed.

Parameters

entityName	the name of the business object to create
------------	---

Returns

The created instance of the business object. The attributes are initialized with the values set by the initialization rules (if any), otherwise the initial values are null.
