## createNotification (IProcess, String)

```
public INotification createNotification (IProcessparent, String  
notificationName)  
throws ServerTimeoutException, AccessDeniedException, ExecutionException;
```

This method creates the specified notification. If there are any rules associated with the creation of the notification they are executed.

### Parameters

notificationName	the name of the notification to create (the notification with this name must be configured in the business space version)
------------------	---

### Returns

The instance of the created notification
