getAttributePaths () 2

[Programmers Reference](#), [Methods](#), [DataPresentationTemplate Class](#), [getAttributePaths](#)

getAttributePaths ()

```
public String [] getAttributePaths ()
```

This method returns the attribute paths used inside tags in the document template. The attribute paths are represented in the form `objectName.attributeName`. Note that the paths returned are not necessarily the complete expressions used inside the tags. A tag expression may contain not only the attribute paths, but also arithmetic expressions with these paths. The paths used by the template would have been set by the [setAttributePaths](#) method.

Parameters

none

Returns

The attribute paths used in the document template or `null` if none are used.
