getAttributeValue (String) 2

[Programmers Reference](#), [Methods](#), [IEntity Interface](#), [GetAttributeValue](#)

getAttributeValue (String)

```
public Object getAttributeValue (String attributeName)
throws InvalidParameterException
```

This method returns the value of the specified attribute. Note: the attribute must not be a reference. Use the [getReference](#) method to retrieve references.

Parameters

attributeName	the name of the attribute of the business object or notification the value of which is returned
---------------	---

Returns

The value of the attribute as Object. The type of the object corresponds to the type of the attribute. See the Appendix A that provides the mapping between attribute types and Java types.

Throws

InvalidParameterException	if the specified attribute name does not exist in the business object or notification
---------------------------	---
