getEntities (IProcess, EntityIdAndName []) 2

[Programmers Reference](#), [Methods](#), [IExecutionEngine Interface](#), [IExecutionEngine Interface Methods](#), [getEntities](#)

getEntities (IProcess, EntityIdAndName [])

```
public IEntity [] getEntities(IProcessparent, EntityIdAndName [] entities)
throws AccessDeniedException, ExecutionException;
```

This method retrieves the specified instances of the specified business objects.

note

any large binary attributes (of the Binary, Document and Picture types) are not retrieved by this method - the value of the corresponding attributes will be null. To retrieve the values of binary attributes use the [getBinaryData](#) method. . The getEntities method also retrieves only single references of the object. To retrieve all references of the object, use [getAllReferences](#) method.

Parameters

entities	the names and unique id's of the business object instances to retrieve
----------	--

Returns

the retrieved instances of the business objects or null if the instances were not found.
