getEntity (IPProcess, String, Long)

```
public IEntity getEntity(IProcessparent, StringentityName, Long id)
throws AccessDeniedException, ExecutionException;
```

This method retrieves the specified instance of the specified business object.

note

Any large binary attributes (of the Binary, Document and Picture types) are not retrieved by this method - the value of the corresponding attributes will be null. To retrieve the values of the binary attributes use the [getBinaryData](#) method. The [getEntity](#) method also retrieves only single references of the object. To retrieve all references of the object, use [getAllReferences](#) method.

Parameters

entityName	the name of the business object to retrieve
id	

Returns

The retrieved instance of the business object or null if the instance was not found.
