## hasFunction (String, int)

```
public boolean hasFunction (String functionName, int paramNmb)
```

This method must return true if the library contains the function with the specified name and number of parameters. **AwareIM** will call this method to find the library responsible for the calculation of a particular function referenced in a rule.

### Parameters

|              |                                   |
|--------------|-----------------------------------|
| functionName | the name of the function          |
| paramNmb     | the number of function parameters |

### Returns

True if the function with the specified name and number of parameters is supported by the library, false otherwise.
