hasFunction (String, int)

```
public boolean hasFunction (String functionName, int paramNmb)
```

This method must return true if the library contains the function with the specified name and number of parameters. **Aware IM** will call this method to find the library responsible for the calculation of a particular function referenced in a rule.

Parameters

| | |
|--------------|-----------------------------------|
| functionName | the name of the function |
| paramNmb | the number of function parameters |

Returns

True if the function with the specified name and number of parameters is supported by the library, false otherwise.
