setAttributeValue (String, Object)

```
public void setAttributeValue (String attributeName, Object value)
throws InvalidParameterException
```

This method sets the value of the specified attribute.

> **note**
>
> The attribute must not be a reference. Use the setReferences method to set references.

Parameters

attributeName	the name of the attribute of the business object or notification the value of which is set
value	the value of the attribute to set as Object. The type of the object corresponds to the type of the attribute. See Appendix A that provides the mapping between attribute types and Java types.

Throws

InvalidParameterException	if the specified attribute name does not exist in the business object or notification
